Mr. Grack, Department Head, Computer Science:

In today's world technology is developing quickly, and technology teachers are confronted with the challenge of keeping pace with those changes to prepare our students to compete at excellent higher education institutions and the professional workplace. Recently, computer science department staff attended technology conferences where a new **3-D graphic computer programming language called Alice** was discussed. We saw Alice as a tremendous resource to introduce Troy Tech students to computer programming in an object oriented environment. We **approached TTSO about fundraising** a new computer lab for teaching Alice because, as with the changing nature of technology, we needed computers with greater capabilities to replace our existing aged computer lab to use Alice in our classes. This fall, **thanks to TTSO, approximately 250 students every day are using new computers** that are capable of running current software, and are enjoying learning the Alice programming language. Who knows what future leader is being inspired today because of **the opportunities they are being provided through the help of TTSO. Thank-you parents for your support.**
